

Transforming Manufacturing Operations for Jash Engineering with SAP S/4HANA

Before: Challenges and Objectives

- Legacy systems lacked holistic view of the manufacturing cycle
- BoM changes per engineering drawings
- Inaccurate project/product costing, inadequate access into financial data
- Lack of real-time changes on material requirement and planning
- Global operational supply chain management.
- Management reporting complexities & subcontracting inventory management
- Multiple companies operating on a single platform

SAP Focus Areas with Keyush

- R&D/Engineering: Align projects with strategy
- Sales and Marketing: Gain a 360° customer view
- Aftermarket Service: Optimize service processes
- Manufacturing: Manage work-in-progress with real-time data
- Supply Chain: Forecast and manage costs across networks

After: Results Achieved

- Enhanced product design and change management
- Improved manufacturing costing visibility
- Streamlined supply chain and inventory management which led to effective project management
- Accelerated finance month-end closing and improved customer services with reporting

In 2016 we planned to adopt an ERP software that contributes to the company's success and came in touch with Keyush, their team understands SAP implementation well and its success criteria. They understood our requirements, processes, and industry needs and recommended S/4HANA as the perfect solution to meet our needs.

Since implementation, we have observed improved productivity and efficiency in production tracking, costing and inventory optimization. The Keyush team has been very supportive during the implementation.
